[Project Title]

[Student 1 (UNI)], *[Student 2 (UNI)]*, *[Student 3 (UNI)]*
COMS 6998: AI-Native Computing | Fall 2026
P2: Prototype & Pilot Results | Due November 9, 2026, 11:59 PM ET

Format. Write **two pages**, excluding references. Figures and tables count toward the two pages. Use the four sections below and replace the guidance and bracketed fields with your project content.

Submission. Submit this report as a PDF.

I. Project Goal and Updates

Briefly state your project goal and the research problem it addresses. Summarize any updates to your scope or direction since Milestone 1 and explain the reasons for these changes.

II. Method Overview

Briefly describe your current approach, its main components, and how they work together. Explain your key design choices and how they address the research problem. A diagram can help illustrate your method.

III. Prototype and Pilot Results

Describe your current prototype and what runs end to end. Summarize implementation progress and any components still under development. Include at least one pilot comparison figure, stating the workload, baseline, metric, and key configuration. Explain what the results suggest and what you learned.

IV. Next Steps

Outline your next steps toward **Milestone 3 on Nov 23**. Identify the main remaining risk and how you plan to investigate it. State the comparisons and experiments you aim to complete.
